Universal Connector Adapters
FOD 5050 Series

The 5050 Series Universal Adapter System is designed specifically for fiber optic equipment requiring removable connectors for cleaning or for quick connector style changes. Compact and economical, the 5050 Series is ideal for test equipment, optical talk sets, multi-port network simulators, as well as high use equipment in laboratory or production environments.

The UCI (Universal Connector Interface) base accepts FC connectors on the back side of any front panel or frame. Users can then choose from a variety of connector styles for system or cable access on the front panel. Protective covers for protecting adapters from dirt or other contaminates are also available.

RoHS Compliant.

For custom applications please contact us at sales@fods.com.
